

Environmental Policy

The protection of the environment is an essential part of the way **Acciai Speciali Terni S.p.A. (Arvedi AST)** plans, implements and improves its activities. For that reason, we adopt and maintain an **Environmental Management System (EMS) in compliance with the ISO 14001:2015 standard** for many years, based on the principles of prevention, impact control and continuous improvement of the environmental performance.

In daily work these principles become shared choices and responsibilities and the Top Management ensures their implementation through the following commitments and concrete objectives:

- **protect the environment** by preventing pollution and managing significant environmental aspects, including the protection of natural resources and biodiversity, with attention to territorial impacts and the expectations of local communities;
- **comply with applicable conformity obligations** (legislative requirements and other subscribed requirements) ensuring their integration into processes, periodic verification and continuous updating;
- **continuously improve the Environmental Management System (EMS)** and environmental performance by translating commitments into measurable objectives, action plans, resources, responsibilities and indicators;
- **involve people** by promoting training and awareness so that each role contributes, with consistent behavior and daily attention, to environmental aspects;
- **steer the supply chain** by qualifying and sensitizing suppliers and partners and promoting environmental criteria throughout the entire supply chain and in outsourced activities;
- **manage risks and changes** by reducing impacts along the operational cycle and adopting effective technical and organizational choices even in non-ordinary conditions or in case of new activities;
- **communicate transparently** by making available the relevant information about the EMS and maintaining an active listening towards the needs, reports and expectations of interested parties;

The Environmental Responsible requires the application of this Policy at all sites within the certificate's scope, ensuring its updating and demanding compliance even in contracted and supplied activities, based on risks. This document is made public for all stakeholders and it's available on the website and company bulletin boards for consultation and dissemination.

**The Environmental
Responsible for**
